SUMMARY

Backend engineer with 7 years of experience building high-throughput distributed systems in Go. Focused on event-driven architecture, reliability and developer tooling.

EXPERIENCE

Streamline Payments - Senior Backend Engineer

2021-04 to present | San Francisco, CA

- Designed an event-driven settlement pipeline on Kafka processing 50,000 transactions per minute.
- Built an idempotent payment retry service in Go that reduced duplicate charges by 99%.
- Led the migration of 30 microservices from a monolith to Kubernetes on AWS EKS.
- Introduced OpenTelemetry tracing across 12 services and cut incident triage time from 45 to 10 minutes.

Northwind Logistics - Software Engineer

2018-06 to 2021-03 | Oakland, CA

- Developed a shipment tracking API in Go and PostgreSQL serving 3 million requests per day.
- Implemented a Redis-based rate limiter protecting partner APIs.
- Wrote gRPC services for route optimization used by 200 warehouses.

EDUCATION

B.S. Computer Science, University of California, Davis, 2018

SKILLS

Go, Kafka, Kubernetes, AWS, PostgreSQL, Redis, gRPC, OpenTelemetry, Docker, Terraform
